WEATHER BUREAU

## General Summary of Weather Conditions

January 1960 was close to being a normal January in most parts of Canada. Temperatures were generally higher than usual in Eastern Canada and lower than usual in the West. Total precipitation was on the whole rather below normal, with excesses in the Avalon Peninsula, New Brunswick, Southern Ontario, and coastal areas of British Columbia. Departures from the seasonal normals, both of temperature and total precipitation, were for the most part not extremely large.

January 1960 was dull month in Newfoundland, with more than average snowfall and less than average sunshine. Temperatures were only a little higher than normal in the southeast, but four to six degrees above normal in the north. Rainfall was deficient in the southeast - Torbay reported less than an inch of rain, less than half the usual amount - but about normal elsewhere. Snowfall was more than twice normal in most areas. Torbay Airport, which receives 28.6 inches of snow in an average January, reported a record 63.8 inches, and the City of St. John's 76.4 inches. Torbay had at least a trace of snow on every day in January. Nearly half the snowfall of the month occurred in the period from the 7th to the 12th, as a deepening low passed through the Great Lakes and the Gulf of St. Lawrence to become almost stationary off Newfoundland.

A number of storms affected Eastern Canada in January, passing through or to the south of the Great Lakes, and then deepening over New England or off the coast, and turning northward to pass through the Maritimes. As the depressions passed through the Maritimes, strong northerly flows developed. On the 3rd, a low moving across the Maritimes from the southwest brought heavy precipitation, record high winds, and warm temperatures. Another storm on the 8th brought cold northwesterly winds over the area to give the coldest weather of the month. Other stormy periods occurred on the 15th-17th, and from the 19th to the 22nd. Wind, temperatures and snowfall were all above normal in the area.

Daytime temperatures averaged about normal in the Maritime Provinces, but high night-time temperatures, a result of high winds and cloudy skies, gave mean temperatures above the seasonal values. The first few days of the month were mild, and there were readings into the fifties on the 3rd.

Rainfall was below normal in Nova Scotia and Prince Edward Island. In New Brunswick, only the extreme north received less than normal rainfall. The storm of January 3rd brought heavy rains to southern New Brunswick - Saint John recorded 2.73 inches of rain on this day. As a result, rainfall totals in this area were well above the usual January values.

Snowfall, on the other hand, was above normal in most areas of the Maritime Provinces, with northern New Brunswick and the south coast of Nova Scotia the only exceptions. Excesses reached over seventy per cent in many areas. Much of the snow fell in the period from the 19th to the 23rd. Moncton recorded 17 inches of snow in twenty-four hours on the 19th-20th - the heaviest twenty-four hour January snow fall in the twenty-one year record at the Airport.

Temperatures in January 1960 were near seasonal values in southern Quebec, with no periods of warm weather and only one notable cold spell, from the 7th to the 12th. North of the Saguenay, the month was relatively mild.

Precipitation in Quebec in January was rather spotty, although there were few really large excesses or deficiencies. Rainfall was in most areas well below normal. Montreal had less than half the normal January rainfall; much of the total fell as freezing rain on the 2nd-3rd. Snowfall was generally below normal along the Eastern Townships. Quebec City, however, had 37.0 inches of snow, 11.0 inches above normal, making January 1960 the snowiest January there since 1954. Snowfalls were heavy also along the Upper Ottawa, Gatineau, Lievre and St. Maurice Rivers. Megantic also reported excesses both of rain and snow. Over the northern part of the Province, to the north of the Saguenay, falls were about half normal.

January temperatures in southern Ontario were close to seasonal values in the east, but mild to the west. There were no periods of unusual temperature; and the range of temperatures was narrower than usual in January. Toronto, London and Windsor did not record a single sub-zero reading in the month, and only in the Windsor area did temperatures reach the fifties, on the 12th.

Precipitation was generally heavy in southern Ontario. In the east, from Belleville to Ottawa and Montreal, there were small deficiencies, but westward, both rain and snow were heavier than usual. Falls were particularly heavy to the east of Lake Huron and to the south and east of Georgian Bay. Muskoka reported twenty inches more snow than usual in January, and fifty inches of snow remained on the ground there at the end of the month.

The main weather feature of January in much of southern Ontario was the severe ice storms of January 2nd, 12th-13th and 16th. The most severe of these storms in the Toronto area occurred on the 12th-13th, when over an inch of freezing rain fell. The effect on power lines and communications was particularly serious, as these ice storms followed the disruptive storm of late December; northwest of Toronto, some rural areas were without electric power for several weeks. Gusty winds intensified the effect of the ice; in the Toronto area winds peaked to gale force on eleven days of the first three weeks.

In northern Ontario January was relatively mild with less than the usual snowfall. Temperatures ran from four to six degrees above the January normals. Night-time temperatures were particularly high, especially in the north. There was one cold spell, from the 4th to the 10th. Precipitation was about twenty to thirty per cent below the usual January amount. Very little freezing rain extended into northern Ontario.

January 1960 was fairly close to a normal January in the Prairie Provinces. Temperatures averaged two or three degrees below the seasonal in southwestern Manitoba, southern Saskatchewan and southern Alberta. The first and fourth weeks were cold in most of the area. The last few days in the month were warm in Alberta and southern Saskatchewan; many stations in southern Alberta reported temperatures into the forties on the 30th.

Rainfall amounts were negligible in the Prairie Provinces in January. Snowfalls ranged generally from three to eight inches. In most of the region, there were deficiencies of twenty or thirty per cent. A few stations showed excesses; in several small areas, snowfalls totalled ten to fifteen inches, surpluses of sixty to a hundred per cent.

In British Columbia, also, the temperatures and precipitation were fairly close to those of a typical January. Temperatures were two to four degrees below normal in the southeast, but a little above normal along the coast. The last few days were very mild throughout the Province.

Precipitation totalled from thirty or forty per cent above normal in the southwest and in an area near Shushwap Lake and the Arrow Lakes. In the remainder of the Province, falls were about thirty to forty per cent below the usual January totals. There were no really large storms, and fewer gales than in a normal January.

Temperature and precipitation were fairly near normal January values in the Yukon. Temperatures at Whitehorse averaged two degrees below normal, but the mean of minus thirteen degrees at Dawson was three degrees above its long-term January average. A spell of mild weather early in the month gave a temperature of thirty-nine degrees at Whitehorse on the 5th. The remainder of the month was cold in the north, but in the south milder spells occurred from the 17th to the 20th. A milder spell again occurred on the last two days, with temperatures of thirty-five degrees at Whitehorse, but only five degrees at Dawson.

Precipitation in the Yukon was all in the form of snow. Amounts ranged fairly near the normal - seven inches of snow at Whitehorse was a small excess, and fourteen inches of snow at Dawson was a surplus of about fifty per cent.

Over the Northwest Territories January temperatures were below normal in the west and above normal to the east. Precipitation was everywhere light, with most stations reporting only an inch or two of snow. One exception was Norman Wells which reported thirteen inches, just twice the normal January fall. Heavy falls occurred also on the east shore of Baffin Island, where Clyde reported twenty inches of snow, more than four times the usual January fall. Cape Dyer had twenty-three inches. The excess did not extend to Frobisher Bay, which reported about seven inches - very slightly below the normal snowfall for January.

# JANUARY 1960
# TEMPERATURE, PRECIPITATION AND SUNSHINE

The temperatures for the month are given in degrees Fahrenheit in the temperature columns under the following headings:
MAX. The highest temperature.
MIN. The lowest temperature.
MEAN The mean temperature for the month.
The remaining columns give the following information:
PRECIP. The total precipitation in inches for the month including the rainfall and the equivalent of the snowfall.
SUN The total hours of bright sunshine for the month.
SNOW ON GRND. The depth of snow in inches lying on the ground at the end of the month (when reported).
The use of A following the station name indicates that the meteorological observations are taken at Airport offices.
